Short Term Irrigation Service (Minimum of 2 Months)

Three Phase Service – Small, Less than 30 kW Demand

AVAILABILITY

Service under this schedule is available at points on the Cooperative's interconnected system where existing facilities of adequate capacity and three phase and the desired voltage are adjacent to the premises to be served.

APPLICABILITY

Service under this schedule is applicable to power and energy supplied to farm and ranch members at one point of delivery and through one meter for the operation of irrigation pump motors.

This rate schedule will apply during the present irrigation season if a member's peak demand is less than 30 kW during the prior irrigation season.

This rate schedule is applicable to those irrigation services which will operate a minimum of two months. This rate schedule will apply through the entire irrigation season.

If you will not be using your irrigation service during an irrigation season, or if you are selecting the short term irrigation rate option, you must notify the Cooperative office prior to the irrigation season.

TYPE OF SERVICE

The type of service provided under this schedule is three phase, at secondary or primary voltage and supplied through one meter at one point of delivery. If service is provided at primary voltage, the contract for service shall specify the point of delivery, establish all metering costs to be paid by the member, and delineate ownership and control of such facilities.

SEASONAL DEFINITION

This service will be available for any months during the normal irrigation season, April through October, however, a minimum of two months is required. If irrigation accounts are not paid in full by January 5th of the next calendar year, the outstanding balance plus the amount of last season's total bill will be due and payable before the account is connected for the next season.

BILLING DEMAND

The Billing Demand is the average kW supplied during the 15-consecutive-minute period at maximum use during the billing period, adjusted for Power Factor.

POWER FACTOR

Where the member's Power Factor is less than 97%, as determined by measurement under actual load conditions, the Cooperative may adjust the kW measured to determine the billing demand by multiplying the measured kW by 97% and dividing by the actual Power Factor.

PHASE PROTECTION

The Cooperative will not be responsible for damage to member's equipment caused by the loss of one or more phases serving member's equipment. It is the member's responsibility to obtain and install adequate phase protection for all three phase motors.

MONTHLY CHARGE

The Monthly Charge is the sum of the Customer Service, Local Access, Transmission, Power Charges, Billing Demand, Power Factor and the Salmon River Electric Cooperative (SREC) Power Cost Adjustment at the following rates.
